

# **T-0168AC**

## ***True Pump Alignment***

**A4LD • 5R55E • 5R55N/S/W**

Our new T-0168AC features the only type of design that truly aligns these pumps and, when applicable, the bell housings.

The overall length of the inner shaft reaches all the way to the rear stator bushing to ensure everything is dead-on.

The T-0168AC is milled from steel, perfectly sized for the task at hand. We've knurled a good-sized area into the end to serve as the handle. Grippy even when/if your hands aren't.

The steel center shaft is centered exactly and then welded in place.

One tough tool designed to last you a lifetime!

Answering challenges with profitable solutions.
