

# WE APPRECIATE DOING BUSINESS WITH YOU

## Here's how to successfully install

# BRNY

Note: Some case halves will need to be modified in this corner area so BRNY will sit flush when assembled

### A Patented transfer case repair for NP236, 246, 261, & 263.

- 1) Discard factory protector clip.
- 2) If necessary, thoroughly clean area and repair hole(s) in pump pocket with an epoxy (such as JB Weld) or replace the case half.
- 3) Assemble front case half and place **BRNY** onto the pump. (figure 1)

#### WARNING:

**DO NOT FORCE CASE HALVES TOGETHER**

261 / 263 Units sometimes have an O-Ring on opposite side of pump that may be removed to gain clearance!

- 4) Due to variances in both OEM and aftermarket manufacturing, the pump pocket may need to be modified to allow **BRNY** to sit flush. If you have a problem locking the snap ring, you'll have to make the rounded corner more square in the areas highlighted (figure 2).

Case is now protected at all 4 contact points of the pump
